REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: Applicants amendments and arguments have caused the previously relied upon prior art rejections to be withdrawn. Specifically, all prior art rejections were based on obviousness-type rejections using Yamada (JP 2003-192925, equivalent to US 2005/0143502) as the primary reference. However, as Applicants point out, Yamada does not teach any molecular weight range preferences for the polylactic acid employed therein or that the molecular weight is critical. Further, Applicants data shown in figures 1 and 2 shows the dramatic influences that sodium oxide impurity levels have on the molecular weight of the polylactic acid as well as the total flaming combustion time. The Examiner had originally relied on the position that such results are to be expected from what was already known in the art before Applicants filing date of the Application (see the documents recited in the response to arguments section of the last Office action). However, there is nothing in those references which would suggest to a person having ordinary skill in the art the criticality regarding impurity levels of sodium oxide at 0.2%. Further, the non-linear relationship shown in figures 1 and 2 of Applicants specification clearly shows the criticality of keeping the sodium oxide content below 0.2%, such a value is not taught or suggested by the prior art. It is believed that the improvements shown in the data set forth in figures 1 and 2 are greater than those which would have been expected from the teaching of the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
